Abstract (en)
[origin: WO0243092A1] The invention relates to an electrical arrangement, comprising a control and/or signalling device with a front element (6), a fixing adapter (10) and at least one functional element (8) which can be mechanically connected to the front element (6) with the fixing adapter (10). According to the invention, the control device can be detachably connected to a coupling module (4). Mechanical connecting means (41) which guarantee the fixing of the coupling module (4) to the at least one functional element (8) are provided for this purpose. At least two fixed back grips (41b) which are separated from each other by a free space (41a), respectively, and the same number of snap-in projections (41c) of an elastically movable snap-in arm, each corresponding with a back grip (41b) and separated from each other by a free space (41a), are provided.
