Abstract (en)

[origin: FR2815509A1] The personalised information broadcast method has the simultaneous use of multi broadcast cell broadcasting encryption information. The information is individualised. The information is decrypted at the mobile telephone by a processor which manages and gives access to the information. The personalised information broadcast method has a personalised form of text message broadcast using individualised encrypted cell broadcasting. After broadcasting the information is decrypted at the mobile telephone by a processor which manages and accesses information, allowing subscriber access to desired services.
