Abstract (en)
A candlestand (1) is proposed which can prevent molten wax from sticking to a pin for supporting a candle. A water dish (5) is provided on a shelf (4) of a support stand. A plurality of pins (7) for supporting candles (A) are provided in the water dish (5) at intervals. Water is put in the water dish (5) to such an extent that the pins (7) are almost immersed therein. The stored water spontaneously put out flames of candles (A) stood on the pins and prevents molten wax from sticking to the pins (7) by covering the pins with the candles until they are spontaneously put out by the water. <IMAGE>
