Abstract (en)
[origin: WO0243934A1] The invention relates to a system for producing and preparing fibres. Said system comprises a first separator that is connected downstream of a tubular dryer, the fibre outlet of said separator being connected to a second separator by means of a connecting conduit. A size application device (9), formed by a section of conduit containing an internal tube (14) that is provided with air passages (13) and has a greater flow cross-section than the connecting conduit, is integrated into said connecting conduit. The internal tube is surrounded by an external tube (15), which together with the internal tube defines an annular chamber that has at least one compressed air connection (20).
