Abstract (en)
[origin: WO0244041A1] The invention relates to a pouring device for a liquid container (2) having a pouring insert comprised of a fixing element (3), which can be inserted into a pouring opening (1) of the liquid container (2) and which is provided for flow channels (6). Said flow channels are arranged in an annular manner around the central axis of the fixing element and project in the direction of this central axis into the liquid container (2). In order to obtain advantageous structural conditions, the invention provides that the flow channels (6) are provided solely in an outer annular area whereby delimiting a main channel (8).
