Abstract (en)
[origin: WO0238466A1] The invention refers to a multipac, used as a distribution package, intended for several units as cans, bottles or other items, where the uniting function is a tensioned band (2) combined with contact areas between the single units and friction creating elements. These elements consist of flaps (3), foldable upwards or downwards from an upper or lower carrier sheet (1) extending in between adjacent units and at least one sidewall (4) folded downwards or upwards from the periphery of the carrier sheet (1) intended for contacting the outside of adjacent units, said flaps (3) and sidewall (4) in combination with the band (2) creates a connection between the carrier sheet (1) and single units through compression of the friction elements in the contact areas found between the friction elements and the units, which are to be held together by the tensioned band.
