Abstract (en)

[origin: WO0244488A1] The invention relates to a device for fixing objects to walls, ceilings or floors which are formed from a hardenable casting compound, at least on the fixing side. Said device consists of one or more tubular fixing elements which are fixed to a support. Said support can be cast in the casting compound in such a way that the respective fixing element is visible on the fixing side. The usefulness of a device of this type is improved by the modular construction of the support from several support elements (1) which have connection elements (2) for connecting one or more corresponding support elements (1). Said support elements can be interconnected directly or using one or more intermediate members (3).
