Abstract (en)

[origin: WO0237347A1] The present invention relates to an ordering system comprising at least one ordering unit, one or more terminal systems, and at least one central computer server. The server comprises at least one registration database for registration of one or more sets of data concerning said at least one ordering unit, at least one assortment database including at least one address of one terminal system and at least one associated set of offers, at least one central control adapted to provide representative data from one or more assortment databases to at least one ordering unit upon request by said at least one ordering unit. The at least one ordering unit may establish a connection to said server, and said server may establish one or more call connections to said at least one terminal system, and the at least one terminal unit is adapted to receive one or more calls from said server on a dedicated connection and to respond to said server on the basis of such a call. The invention also relates to a terminal unit to be used in an ordering system, a method of ordering and the use of an ordering system.
