Abstract (en)
[origin: EP1338222A2] The support device has a fixedly mounted support element (12) with opening (17) for a hanger (20) formed in a section which in the assembled state is horizontal and is freely accessible. The hanging lip (21) and bearing faces (22, 23) are provided on the hanger so that by tilting the front area of the lip in a horizontal angular section the hanger can be swivelled into the opening whereby the position of the lip attachment and part of the bearing faces in relation to the centre of gravity of the hanger ensure that the hanger automatically remains secured. the hanger is made from flat material.
