Abstract (en)  
[origin: EP1338520A1] The pot (1), having a threaded neck (22) with an opening (23) and a screw top (30), is made with an inner reinforcing member (2) with vertical extensions (4, 6, 7) of a first material, and an outer shell (11) of a second, less rigid material that is at least partly deformable, so that a pressure applied to its deformable portions (13, 14) pushed the product inside the pot out through the opening. The vertical extensions of the reinforcing member are joined together adjacent to the neck of the pot, and they increase in width in that direction.
