Abstract (en)
[origin: EP1338733A1] The lock cylinder (1) has a mechanical closure (4) and an electrically controlled lock stop (5) mounted in a chamber (11) rotationally fixed to the lock core (2,3) which receives the closure. The peripheral dimension of the chamber of the lock cylinder, in the sense of the preset limited free rotation angle of the core under the action of a key, is greater than the dimension of the lock stop.
