Abstract (en)  
A recording method for recording digital signal reproduced with sub-code information from a first recording medium in which the digital signal and sub-code data are recorded, is as follows: It is judged whether the signal reproduced from the first recording medium is digital signal or not. In the case that the digital signal is detected, the recording operation of digital signal to a second recording medium starts, and simultaneously, the change of track number to be recorded in the second recording medium becomes to a waiting state for a predetermined time. After the predetermined time, it is judged whether a mute portion of the digital signal reproduced from the first recording medium continues for the predetermined time or not. If it is judged that a mute portion continues for the predetermined time, the change point of track number outputted from the first recording medium with the digital signal. After the change point is detected, it is detected whether the index information of the sub-code outputted with the digital signal from the first recording medium arrives at the head position of digital signal reproduced next from the first recording medium or not, based on the change. After it is detected that the index information arrives at the head position, the track number of data to be recorded in the second recording medium is updated, if it is detected that the outputted digital signal includes the audio data, in the state that the continuity of reproducing lapse time of digital signal to be outputted from the first recording medium.
