Abstract (en)

[origin: EP1339081A1] A fastening section (11) fastens a lead-through (2) on a switch device moving between contact and disconnection positions. A retainer section (10) holds and isolates a conductor (13) fixed on the switch device. An inner field control element (FCE) (19) links to the conductor. An outer FCE (20) fits opposite the inner FCE in a penetrating area (17). An Independent claim is also included for a power switch with a lead-through.
