Abstract (en)

[origin: WO0243920A1] The invention relates to a hand tool, in particular a hand-held angle sander or hand-held circular saw, comprising a carrier device (12), using which a tool attachment (16) can be connected interactively to a drive shaft (18). According to the invention, at least one method step during the replacement of a tool attachment (16) can be detected by at least one sensor (10), triggering a signal.
