Abstract (en)

[origin: WO0246352A1] A fermentation system for vegetable substances (3) is described, in particular for grapes, comprising at least a container (2) containing said vegetable substances (3), first means (5, 6) for transferring said vegetable substances (3) from a lower section to an upper section of said container (2), a device (4) for spraying and mixing said vegetable substances (3) transferred by said first means (5, 6) with the vegetable substances (3) contained in said container (2). The invention is featured in that said spraying-mixing device (4) is provided with second means being apt to perform a first angular movement and third means being apt to perform a second angular movement for distributing an even jet of said vegetable substances (3) on the surface (S) of the vegetable substances (3) contained in said container (2).
