Abstract (en)
[origin: WO0236901A1] There is provided a guide strip (1) to assist in cement rendering around window frames and like openings. The strip (1) is the combination of two longitudinally extending portions (2, 3) joined in side-by-side relationship by a frangible part (4). The base strip (2) being one of these portions, is to be left in-situ within the render and has a render depth setting lip (6) extending from one side thereof alongside the frangible part (4). The window frame masking portion (3), being the remaining portion, can then be longitudinally snapped leaving only the base strip (2) embedded in the render. The strip (1) includes a connection means such as a ribbon 9 of double-sided adhesive to secure the base strip (2) to the window frame (12) prior to rendering.
