Abstract (en)

[origin: WO0239399A2] A parking control system for managing a covered or non-covered parking facility comprises entrance control means (10, 30) which are able to co-act with an issued access means (1) to register and optionally facilitate entry to the parking facility. Charging means and payments means (40) are further provided for associating a parking fee to a presented access means after expiry of a certain parking period and for transacting payment thereof. The payment means are coupled to data storage means (2, 20) in which a parking credit associated with the access means can be registered. A parking fee associated with the access means can be deducted from this parking credit, wherein different users of the system are able to register and top up the parking credit in the data storage means.

[origin: WO0239399A2] Parking control system for managing a covered or non-covered parking facility comprising access control means (10, 30) which work together with access means (1) for registering and facilitating access to the parking facility.
