Abstract (en)
[origin: WO0243374A1] The invention relates to a convergent box set consisting of a standard audio-video transmission cable and an electronic switch and control device which is arranged on both ends of the cable. The invention enables modern television and multimedia applications to be carried out on a commercial television set in a cost-effective manner without using expensive set-top boxes. Said applications include internet access on the television, secure home banking using the television and the remote control, digital storage of audio clips and television programmes, personal programming of the television and video recorder, remote control of the television and video from the internet, playing DVDs, video CDs and audio CDs on the television.
