Abstract (en)
[origin: EP1340637A2] The device has a first connection material at least in a region in which at least two components of a first heat exchange unit are close or in contact that fixes the arrangement of these components relative to each other. The material is chose to have a temperature-dependent property identical to at least one of the component materials. AN Independent claim is also included for the following: an arrangement for cooling or heating air, especially for a motor vehicle.
