Abstract (en)
[origin: EP1340873A2] The locking mechanism has a lock housing (10) containing a sliding latch and an operating mechanism for displacement of the latch, cooperating with a sliding carriage provided with a second latch, moved in conjunction with the first latch. The sliding carriage can be moved along parallel guide rails (20), with a blocking element (38) preventing the latch release by fitting through a blocking opening (42) in one rail.
