Abstract (en)  
[origin: EP1340877A2] The arrangement has at least one mechanical energy storage device (7,8) whose energy output is used to move the panel and is influenced by an electrically driven valve (20). Panel movement is detected by a sensor (22) whose output signal is fed to an input of a controller (24) that controls the valve so that the energy output from the storage device is dependent on panel movement.
