Abstract (en)
[origin: EP1340954A1] The system has a distribution channel (3) with an inlet opening (4) and at least one outlet opening (5), a distribution nozzle (6) with a fluid inlet opening (7) and a hollow nozzle body (8) with an opening for outputting fluid into a gas atmosphere. The nozzle body extends along a nozzle axis and its output can be connected to the distribution channel input so that the nozzle axis is tilted relative to the channel axis by a definable angle. An Independent claim is also included for the following: a cooling tower with an inventive system.
