Abstract (en)

[origin: US2003149800A1] This method of managing a personal event log specific to an operating activity executed on a multiple-cell computer platform comprises: while an activity is saving an event, a step of recording the event in a common event log together with an identifier of the activity that is saving the event; and prior to an activity consulting its personal event log, a step of reconstructing the personal event log from the common event log, said reconstruction step including an operation of selecting from the common event log only those events which are associated with the identifier of the activity in order to include those events in the personal event log reconstructed for said activity.
