Abstract (en)
[origin: US2003139080A1] Connection device for an electronic box, comprising a connection module (12) intended to be mated with the longitudinal assembling face of a box (2) and making an electrical connection with, on the one hand, pins (7) projecting from this longitudinal assembling face and, on the other hand, with conducting cables. The pins (7) are longitudinal and the module (12) is fastened to the box (2) by means of a system of discontinuous slideways (8, 9, 15, 16, 17) allowing them to be fastened by longitudinal sliding and reversible locking by means of a resilient tab (18) fitted into a recess (10) in the box.
