Abstract (en)

[origin: WO0247599A1] The invention concerns an operating table comprising a support plate (24) for the patient's kidneys, which plate (24) is mobile relative to the structure (28) of the operating table between a retracted position and an extended position and at least a mechanism for manoeuvring the plate (24) between its positions, which mechanism is equipped with an actuator (30) whereof one first end (32) is connected to the structure (28) of the operating table. The or each manoeuvring mechanism comprises a first link rod (38) articulated relative to the structure (28) of the operating table, which link rod (38) is connected to a second end (36) of the actuator to be displaced at an angle, and to the plate (24) for displacing the plate (24) between its retracted position and its extended position.
