Abstract (en)
[origin: WO0247601A1] A shoe with a foot-massaging effect comprises a sole (2), optionally with a heel (14), and a top material (3). A cushion (5, 11, 23, 67, 68) containing a massage element and/or active medical agents is provided in the interior (4) of the shoe, above the sole (2). Said cushion has a flexible base panel (6) on the bottom, corresponding to the shape of the sole (2), and an elastic protective nonwoven fabric (9) on the top, the latter being permanently connected to said base panel. A toe cap (27) containing active medical agents can also be provided in the tip of the shoe (26). These measures result in a fairly significant foot-massaging effect and at the same time, enable the shoe to be used without creating an odour.
