Abstract (en)

[origin: WO0241993A1] A sample support, especially a titre plate, has recesses (26) in a receiving part (24). Very small samples with a volume of preferably, 0.2-5 μ l are contained in these recesses. The recesses (26) are closed with a cover (10). In order to minimise the evaporation of samples in a hollow space (38), the cover (10) preferably has a porous cover plate (12). Said porous cover plate (12) can be wetted with liquid.
