Abstract (en)
[origin: US6933829B2] An electrical component includes a base, connector elements connected to the base, an intermediate layer on a surface of the base, and a protective layer on the intermediate layer. The intermediate layer and the protective layer are produced from a same material. The material contains a solvent. The solvent has a negative affect on electrical properties of the component. The intermediate layer has a lower content of solvent than the protective layer.
