Abstract (en)

[origin: WO0247101A1] The invention relates to a method for coating a relay (10), especially a relay of a starter device for internal combustion engines. The housing of said relay comprises at least two parts and has a joint (37) between the first housing part (13) and the second housing part (16). An uncured lacquer seal (40) is applied to said joint (37) and is cured in a further step SLH by means of ultraviolet radiation.
