Abstract (en)

[origin: EP1342671A2] A closure device (1) particularly usable for temporarily closing a container for liquids, comprising a first cap (4), which is provided with first elastically deformable elements (6) for connection to the outer neck of the container; a second coaxial and external cap (5) being slidingly and selectively associated with the first cap and comprising second elements for the temporary activation of the first elements and third elements suitable to remove the closure device from the neck of the container. <IMAGE>A closure device (1) particularly usable for temporarily closing a container for liquids, comprising a first cap (4), which is provided with first elastically deformable elements (6) for connection to the outer neck of the container; a second coaxial and external cap (5) being slidingly and selectively associated with the first cap and comprising second elements for the temporary activation of the first elements and third elements suitable to remove the closure device from the neck of the container. <IMAGE>
