Abstract (en)
[origin: EP1342907A2] The device has a housing, an adjustment device, a drive, a valve rod or shaft, a switch element and a control surface, whereby the driven valve rod, which moves relative to the control surface with its permanently attached switch element corresponding to the adjustment device, causes opening and closing of the valve. The adjustment device is designed so that the switch element carries out a combined lifting and rotational movement.
