Abstract (en)

[origin: EP1342959A1] Device comprises at least two core air jet nozzles (6) arranged in different edge regions of an opening and connected to an air blower (1). The outlet openings of the core air jet nozzles are directed in the direction of the opening so that the core air jets (9) produced by the core air jet nozzles are directed through the opening into the refuse depot from different directions at an angle of 1-60degrees. Preferred Features: The core air jets produced by the core air jet nozzles are directed through the opening into the refuse depot at an angle of 15-35degrees. Two core air jet nozzles are arranged on opposite-lying or adjacent sides of the opening.
