Abstract (en)
A target device is used in gun shooting, Japanese archery, archery, etc. The target device has a light-emitting element group (9) of LEDs (91...98), for example, disposed around a target plate. The target device also has an impact position detector (11), a score calculator, and a light-emitting element energizing unit (13A). When an impact position on the target plate (4) is detected by the impact position detector, the score calculator (12A) calculates a score based on the detected impact position. The light-emitting element energizing unit selectively energizes the LEDs of the light-emitting element group depending on the calculated score and/or the detected impact position. <IMAGE> <IMAGE>
