Abstract (en)  
[origin: EP1343057A2] A push button (11) operates interlocking toothed hammers (12,12') which engage cams (15,15') to drive separate mechanisms connected to the hour and minute hands (H,M). At any time the hands may be brought to the midday or other position, remain there for a selected time and then regain normal time after an allowance for the time spent at midday has been made by a pin and hairspring mechanism
