Abstract (en)  
A gaming machine 10 has a display 14 and a game controller arranged to control images of symbols displayed on the display. The game controller is arranged to play a game 16 wherein at least one random event is caused to be displayed on the display 14 and, if a predefined winning event occurs, the machine 10 awards a prize. When a trigger condition occurs in a base game of the game 16, a special feature is awarded where, prior to commencement of the special feature, an animation occurs, without any player intervention. The animation results in a sequence of images being caused to be revealed serially, at least certain of the images revealing a number of bonuses associated with the special feature. A final set of the bonuses awarded in respect of the special feature only becomes known to a player of the game after all the images have been revealed.
