Abstract (en)
[origin: WO0243509A1] A composition useful as a stabilizer for beverage emulsions and a method for its preparation are disclosed. The stabilizer composition contains co-processed modified starch and propylene glycol alginate. The ratio by weight of modified starch to propylene glycol alginate is about 60:40 to about 95:5; and the propylene glycol alginate has a degree of esterification of about 40 % to about 95 %. The co-processed stabilizer composition is prepared by forming an aqueous dispersion of the modified starch and the propylene glycol alginate and drying the aqueous dispersion. Beverage emulsions comprising the stabilizer, beverage products comprising the beverage emulsions, and the methods for their preparation are also disclosed.
