Abstract (en)

[origin: WO0247901A1] Adhesive compositions based on vulcanisable rubber materials, containing liquid polyenes, optionally solid rubbers and/or thermoplastic polymer powders and vulcanising agents are suitable for the production of multi-layered laminates, comprising two external metal sheets and an adhesive sandwich layer. Said sandwich layer can optionally comprise additional flat materials made from synthetic fibres and/or metallic expanded mesh, wire mesh or similar. Said multi-layered laminates are suitable for the inclusion of intrinsically light materials in machine, vehicle or instrument construction, in particular in automobile construction.
