Abstract (en)
[origin: WO0247947A1] The invention relates to a subassembly (1), in particular a braking subassembly of an electronically controlled motor vehicle braking system. Said subassembly comprises a motor (2) with a housing (7), a hydraulic block (4) and motor electronics (6) for controlling or regulating the motor (2). According to the invention, to create a particularly compact subassembly with optimal thermal dissipation properties, the motor electronics (6) are located at least partially inside the housing (7) of the motor (2).
