Abstract (en)
[origin: WO0249937A1] The invention concerns a fluid product dispenser comprising: two sheets (1, 1') one of which at least is deformable, the two sheets forming between them a fluid product reservoir (15), said at least one deformable sheet defining a deformable actuating wall so as to reduce the volume of the reservoir, the reservoir (15) being advantageously provided with elastic means (4) stressing the reservoir towards its maximum volume; a dispensing part (2) sealingly fixed between the two sheets (1, 1') and defining a dispensing orifice (24) through which the fluid product in the reservoir is dispensed. The invention is characterised in that the reservoir (15) is delimited by a first inner weld (12) and the outer peripheral edges of the sheets are welded together along a second outer weld (10) which encloses the first inner weld, the two welds (10, 12) defining between them at least an unwelded zone (11) of sheets.
