Abstract (en)

[origin: WO0248252A1] The invention relates to hot-setting, reactive compositions of natural and/or synthetic elastomers containing olefinic double bonds, based on liquid polyenes and optionally solid rubbers, vulcanisation systems, comprising sulphur and one or several organic accelerators and/or metal oxides and one or several heterocyclic compounds with at least two nitrogen atoms in the ring. Said compositions are vulcanised by sulphur and sulphur compounds with an avoidance or marked reduction of odour nuisance. Said compositions are suitable as adhesives, sealants, or coating agents, in particular in automobile construction.
