Abstract (en)
[origin: WO0250374A1] The invention relates to a process for coating of a wooden, wood-like and/or cellulose-containing substrate comprising the steps of, a) applying a press coating to the substrate, b) applying heat and pressure to the coated substrate to the cure the press coating and to obtain a substrate with a smooth coating film, with the pressure being such that the substrate is not substantially compressed, c) applying a top coat on the substrate after the curing of the press coating, and d) curing said on top coat. As a result of this process, the amount of unreacted double bonds in the coated substrate is at a low level.
