Abstract (en)

[origin: WO02052108A1] A building component structure arrangement, where assembled building components each consist of a frame and on opposite sides thereof are covered by plate or board bodies, optionally with insulating material bounded by the frame and the sheet bodies. The two uprights of the frame are provided with male and female engaging means respectively for cooperation with male and female engaging means of an assembled, adjacently positioned building component. The bottom crosspiece of the frame is provided with means for engaging with a bottom sill means on which the building components are designed to rest. The top crosspiece of the frame is provided with a means for engaging with a top sill.
