Abstract (en)
[origin: WO0244540A2] The invention relates to a fuel injection device (1) comprising a common pressure storage chamber (6), an injector (8), a pressure intensifier, and valves for controlling the injection process and the pressure intensification. A modular construction is developed by means of a pressure intensifier module (16) and a valve module (17), reducing costs and increasing flexibility during the manufacture of fuel injection devices.
