Abstract (en)

[origin: WO0248610A1] The invention concerns a catalytic combustion device comprising a main combustion zone (20, 200) including at least a catalytic section (5, 103) and at least an air/fuel mixing zone (11, 117), said mixing zone comprising at least a pressurised air intake (1, 10) and means for injecting (12, 105) a liquid fuel. The invention is characterised in that the injecting means (12, 105) spray the liquid fuel on a hot wall (13, 15, 107) of said device so as to cause said fuel to be vaporized when coming into contact with said wall.
