Abstract (en)

[origin: WO0250492A1] The invention concerns an automatic toy gun comprising a shell (1) consisting of two half-shells (1A, 1B) preferably moulded in plastic material and rigidly assembled, said shell containing various firing mechanism members and defining at least a magazine for receiving a supply of spherical projectiles. The invention is characterised in that said members such as the firing case, the device supplying said case, the firing pin and its guide and return means, the trigger-sear assembly and its guide and return means, are assembled in a multipurpose unit (2), and the inner surface of said half-shells have a partitioning (3A, 3B) enabling said unit (2) to be built-in and placed in fixed position inside the shell (1).
