Abstract (en)

[origin: WO02052542A2] The invention relates to a method for accurately identifying noise sources producing noise or sound signals. According to the invention, in order to determine a noise signal (S) from a noise source (10), the noise signal (S) is detected and analysed according to the signal characteristics thereof, the noise signal (S) is compared to the models (M) and is associated with a noise source type (T) on the basis of said comparison.
