Abstract (en)

[origin: WO02052522A1] The invention relates to a method for processing noise signals from a noise source in order to locate, identify and classify noise signals both indoors and outdoors. According to the inventive method, several noise signals (SQ1 - SQ4) are detected in relation to a specific location and analysed by means of sound analysis using signal characteristics in order to determine the underlying parameters of the noise source (G1 - G4).
