Abstract (en)

[origin: EP0920954A2] At least one machining tool is equipped with a pair of belt grinders (10,12) with grinding belts (26). The runs of the belts acting upon the glass panes (3) extend in planes which with the plane of the glass pane includes an acute angle and cross one another in the region of the pane's edge. At least one and preferably both belt grinders can be pivoted by an actuator (32,34) into a working position in which their belts are located at the edge of the pane.
