Abstract (en)

A mechanism for locking the breechblock in a semi-automatic rifle, comprises a breechblock carrier (14), slidably guided in a breech (13) housed in a rifle casing (10), a breechblock (50) slidably supported by said breechblock carrier (14), a locking latch (40) suitable for engaging in a seat (18) realised in said breech (13) to lock the breechblock (50) at the breech (13), an cocking clip (19) consisting of a pin which crosses the casing (10), said latch (40) having a groove (42) in which said cocking clip (19) is housed, in such a way that through the mutual engagement of the cocking clip (19) in said groove (42) during the sliding back of the breechblock (50) and the latch (40) the descent of the latch (40) is permitted to release it from engagement in the seat (18) of the breech (13) when a shot has been fired. <IMAGE>
