Abstract (en)

[origin: WO02055394A1] The invention concerns an adhesive-bonded blank for a packaging capsule, a method for producing the blank, and the use of an adhesive-bonded blank erected to form a filled packaging capsule. The capsule is especially intended for emptying the product content in an uninterrupted sequence. The capsule is closed at least at one end by a membrane (43) which is secured to a peripheral edge of double material thickness, obtained by the adhesive-bonding of end flaps folded against the outside of the capsule walls. On top of this membrane there is an end-piece (30). The latter has a border part which is secured to the capsule end with a guarantee closure. The end-piece can be torn along a line of weakening which, in the assembled state, coincides with the end edge of the capsule body.
